Goodbye Hospital Admissions, Hello "Doc Can You Grow Me a New Liver?"

Akram Boutros, MD, FACHE

President and CEO

The MetroHealth System

SUMMER LEADERSHIP SUMMIT 2017

The doctor was the star of the show

And the patients were the extras

The setting was (almost always) the hospital

We waited until something broke, then we fixed it

Working in health care was about us

The patient is taking Center Stage

The hospital is still the setting, but it's moving into the real world, into patient's lives

The plot focuses on so much more than fixing what's broken

Here's what we experience in health care

The patient is definitely the star of the show

The doctor's coming to you

And he's bringing two other specialists with him

We'll have amazing devices

It's not just Star Trek

Medicine isn't just about medicine anymore

It's about the Social Determinants of Health

Medicine is about people like Endia Reynolds, Shedrick Jordan and Kim Jaworski

Medicine comes full circle. It's back to the past. It's about being Mom.
