# Master's Studio

As part of the Academy's multi-channel, on-line approach, these sessions provide healthcare design professionals with the opportunity to “deep-dive” into topics which are highly technical and/or complex.

# Compliance Statement

“AIA Knowledge” is a Registered Provider with The American Institute of Architects Continuing Education Systems (AIA/CES). Credit(s) earned on completion of this program will be reported to AIA/CES for AIA members. Certificates of Completion for both AIA members and non-AIA members are available upon special request.

This program is registered with AIA/CES for continuing professional education. As such, it does not include content that may be deemed or construed to be an approval or endorsement by the AIA of any material of construction or any method or manner of handling, using, distributing, or dealing in any material or product.

# AIA/CES Reporting Details

Your CES credits from this event will be automatically reported given your engaged attendance during the entire event today.

If you are watching in a group setting and have multiple people in the room, please make sure the person who registered for the course, includes your name and AIA member number in their post webinar survey.

We encourage all registrants to fill out the post webinar survey. Your feedback is important and informs us of future webinar topics to better meet listener needs.

# Questions?

Submit a question to the moderator via the chat box.

Content-related questions will be answered during the Q&A portion, at the end of the presentation, as time allows. Any questions not answered during Q&A, will be answered and posted online within two (2) weeks.

Tech support questions will be answered by AIA staff promptly.

# Psychiatric Crisis Centers and Emergency Departments: Emerging Trends, Drivers and Examples

October 13, 2020

**Francis Murdock Pitts, FAIA, FACHA, ACHE, OAA**

# Introduction

## Today's Topics

- The Challenge of the Psychiatric ED
- Topologies and Typologies
- Recently Built/Designed Examples
- Some Drivers and Considerations

# The Underlying Systemic Issues

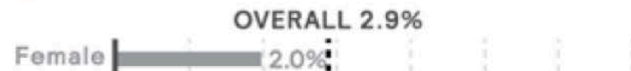

Stigma, Late Diagnosis, Delayed Treatment, Broken Patients

## Costs and Outcomes of Mental Health and Substance Use Disorders in the US

Nearly 18% of Adults in the United States Reported Having a Mental, Behavioral, or Emotional Disorder in 2015

Nearly 3% of People 12 Years or Older Reported Illicit Drug Addiction or Misuse in 2015

## Mental Health and Substance Use Disorders Were the Leading Cause of Disease Burden in the US in 2015

Disability adjusted life years (DALYs) rate per 100,000 population

# The Underlying Systemic Issues

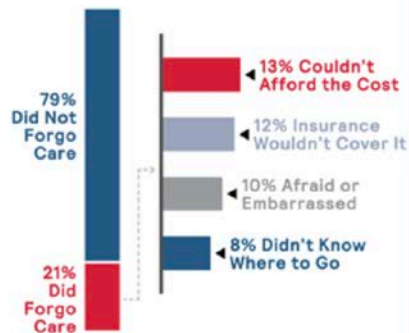

## Stigma, Late Diagnosis, Delayed Treatment, Broken Patients

### Mental Health and Substance Use Disorders Were the Leading Cause of Disease Burden in the US in 2015

Disability adjusted life years (DALYs) rate per 100,000 population

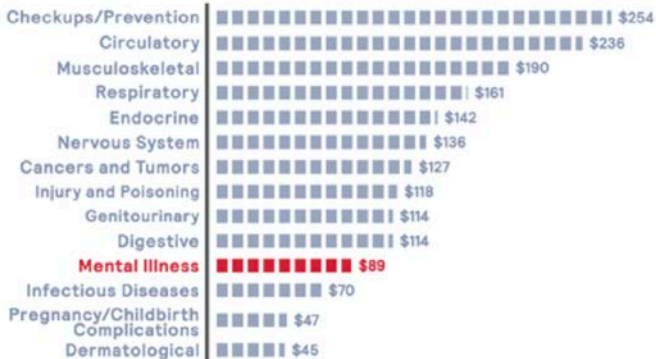

### 1 in 5 Reported That They or a Family Member Had to Forgo Needed Mental Health Services in 2016

### Mental Illness Treatment Accounted for \$89 Billion (5%) of Total Medical Services Spending in the US in 2013

■ \$10 Billion in Spending

# Utilization and Impacts

## Before Covid-19

- 1 in 8 ED visits related to mental health or substance abuse issues
- 44% increase between 2006 and 2014
- 56 % increase for pediatric patients and nearly 41% increase for adults between 2009 and 2015
- Suicidality up 414%
- ALOS increase from 6.5 to 9.0 hours

# Utilization and Impacts

## During Covid-19

- 32% of adults report mental health negatively impacted, March 2020
- 53% mid-July 2020
- Existing mental illness exacerbated
  - Social isolation
  - Postponed treatment
  - Continued delays in diagnosis and treatment

### Internal flexibility

- 1 Three changeable central zones
- 2 Extended observation beds
- 3 EOB day space as extended CPEP
- 4 Waiting as extended CPEP
- 5 Secure holding

The floor plan is organized into several functional areas:

- EOB (Emergency Observation Bay):** Located at the bottom, containing Exam rooms E-1 through E-6 and Quiet rooms.
- CHILDRENS:** A green-shaded area on the right side, containing Exam rooms C-1 through C-6, a Conf. room, and an Office.
- Fast Track:** A yellow-shaded area in the center, containing Exam rooms F-1 through F-5, a Family Discharge Play room, a Property room, a Triage/Security/Reception area, an Adult Wait area, a Storage room, and a Hold room.
- CPEP (Critical Patient Evaluation and Preparation):** A blue-shaded area on the left side, containing Exam rooms O-1 through O-7, a Quiet room, and a Locker.

Central corridors and service areas include Nurses' Stations, Meds, Clean, and Soiled rooms, as well as a large dashed box labeled 'CPEP'.

# Patient Safety

## CMS and the Joint Commission

### Ligatures and Suicide Risk Reduction - Emergency Department - Ligature-resistant Requirements Do emergency departments need to be ligature resistant ?

No. Emergency departments do not need to meet the same standards as an inpatient psychiatric unit to be a ligature-resistant environment. Patients in emergency departments often require equipment to monitor and treat their medical conditions, so it is impossible to make their environment truly ligature resistant. However, organizations must implement safeguards to keep patients with active suicidality safe during the course of treatment in that setting (see also the FAQ titled "[Do we have to assess every patient for suicide risk who comes into the emergency department ?](#)"). In designing the emergency department environment, the organization must first consider state rules and regulations (typically the state health department).

This FAQ was also published in the Perspectives® Newsletter, July 2018, Volume 38, Issue 7 - The Official Newsletter of The Joint Commission.

### Ligature Risks - Assessing and Mitigating Risk For Suicide and Self-Harm

What are the Joint Commission expectations for identifying and managing ligature risks in the hospital setting?

For inpatient psychiatric hospitals, inpatient psychiatric units in general acute care hospitals, and non-behavioral health units DESIGNATED for the treatment of psychiatric patients (i.e. special rooms/safe rooms in Emergency Departments or Medical Units):

The requirements found in the Environment of Care (EC) chapter of the accreditation manual at EC.02.06.01 require hospitals to establish and maintain a safe, functional environment. Element of Performance # 1 states "Interior spaces meet the needs of the patient population and are safe and suitable to the care, treatment, and services provided". Therefore, ligature and self-harm risks must be identified and eliminated. While risks are in the process of being eliminated, policies and procedures must be developed and implemented to mitigate the harm posed by such risks. Mitigation plans must include, at a minimum the following:

- Ensuring that leadership and staff are aware of the current environmental risks
- Identifying patients' risk for suicide or self-harm, then implement appropriate interventions based upon risk.
- Ongoing assessments and reassessments of at-risk behavior as defined by the organization.
- Ensuring the proper training of staff to properly identify patients' level of risk and implement appropriate interventions
- Incorporating suicide risk and self-harm reduction strategies into the overall Quality Assessment/Performance Improvement (QAPI) program - see LD.01.03.01 EP 21.
- If equipment poses a risk but is necessary for the safe treatment of psychiatric patients (i.e. medical beds with side rails on a geriatric unit), the organization must consider these risks in patients' overall suicide/self-harm risk assessments, then implement appropriate interventions to diminish those risks

In non-behavioral health units (i.e. Emergency Rooms or Medical Inpatient Units) that are NOT DESIGNATED specifically for the treatment of psychiatric patients, however, where psychiatric patients may temporarily reside, ligature/self-harm environmental risks must also be identified.

All physical risks not required for the treatment of the patient that can be removed, must be removed. Furthermore, an appropriate level of effective surveillance must be implemented if self-harm risks remain in the environment. Organizational policies and procedures must adequately guide staff in the assessment of patients' risk for suicide/self-harm and the implementation of interventions based upon the patients' individual needs.

For non-inpatient programs surveyed under the Hospital Accreditation manual, an environmental risk assessment should be completed. Based upon the results of that assessment, taking into account the individuals they serve, the organization determines if any modifications to the environment should be made. Policies and procedures should also be developed and implemented to address the immediate action to be taken by staff when a patient is assessed to be at risk for suicide.

# Patient Safety

## NYS-OMH Patient Safety Guide

## Patient Safety Standards, Materials and Systems Guidelines

Recommended by the  
**New York State Office of Mental Health**

With respect to NYS-OMH operated facilities, these Guidelines apply solely to new construction and major renovation projects. Existing facilities should use these Guidelines as a reference document whenever they make improvements.

# The Regulatory Process

## Regulations? What regulations?

“Be vewy, vewy cawful!”

*Elmer Fudd*

- The psych ed is rarely regulated separately as an entity.
- The FGI is in the process of addressing this issue.
- Seek direction from your client's counsel.
- Failing that, consider
  - Use FGI Emergency Department standards for the Free-standing Psychiatric Emergency Department
  - Use FGI Psychiatric Inpatient standards for Extended Observation Units

# Question Reminder

Submit your questions and comments  
via the chat box.

# EmPath

Credit to Scott Zeller

# Zeller's Six Goals for Emergency Psychiatric Care

1. Exclude medical etiologies and ensure medical stability
2. Rapidly stabilize the acute crisis
3. Avoid coercion
4. Treat in the least restrictive setting
5. Form a therapeutic alliance
6. Formulate an appropriate disposition and aftercare plan

# EmPATH

## Emergency Psychiatric Assessment Treatment Healing

Research shows that 75% or more of severe psychiatric emergencies can be stabilized within 24 hours

### What makes the EmPATH Approach Different?

- Designated destination for all medically-cleared patients in crisis prior to determination of disposition or IP admission; not viewed as an alternative destination but *THE* destination
- Designed and staffed to treat all emergency psychiatric patients – philosophy of “no exclusion”
- Immediate patient evaluation and treatment by a psychiatrist, constant observation and re-evaluation
- Provides a calming, healing, comfortable setting completely distinct from the Medical ED
- Wellness and Recovery-oriented approach

# Physical Space Design

Calming, healing environment that prioritizes safety and freedom

## **Large, open 'milieu' space**

where patients can be together in the same room – high ceilings and ambient light, soothing decor

## **Designed to facilitate**

socialization, discussion, interaction and therapy

## **Per chair model**

outfitted with fold-flat recliners

## **Space recommendation**

80 sq. ft. total per patient, which includes 40 sq. ft. patient area around each recliner

## **Open nursing station w/instant access to staff**

No 'bulletproof glass fishbowl' separate from the patients

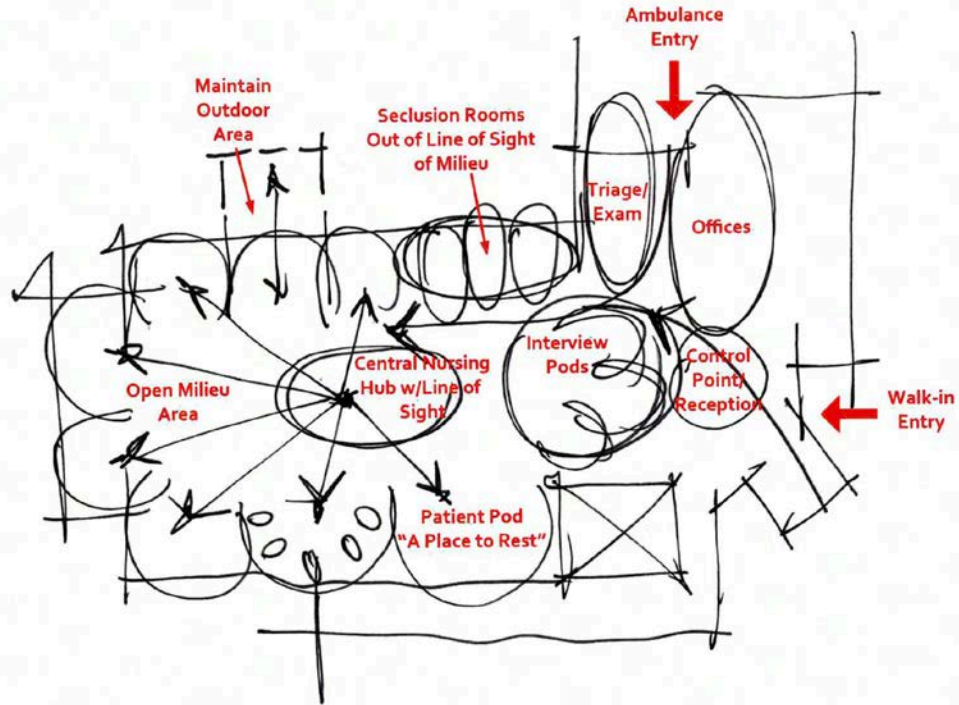

## **Voluntary Calming Rooms**

Avoids locked seclusion rooms or restraints

# John George Hospital

## The Alameda Model

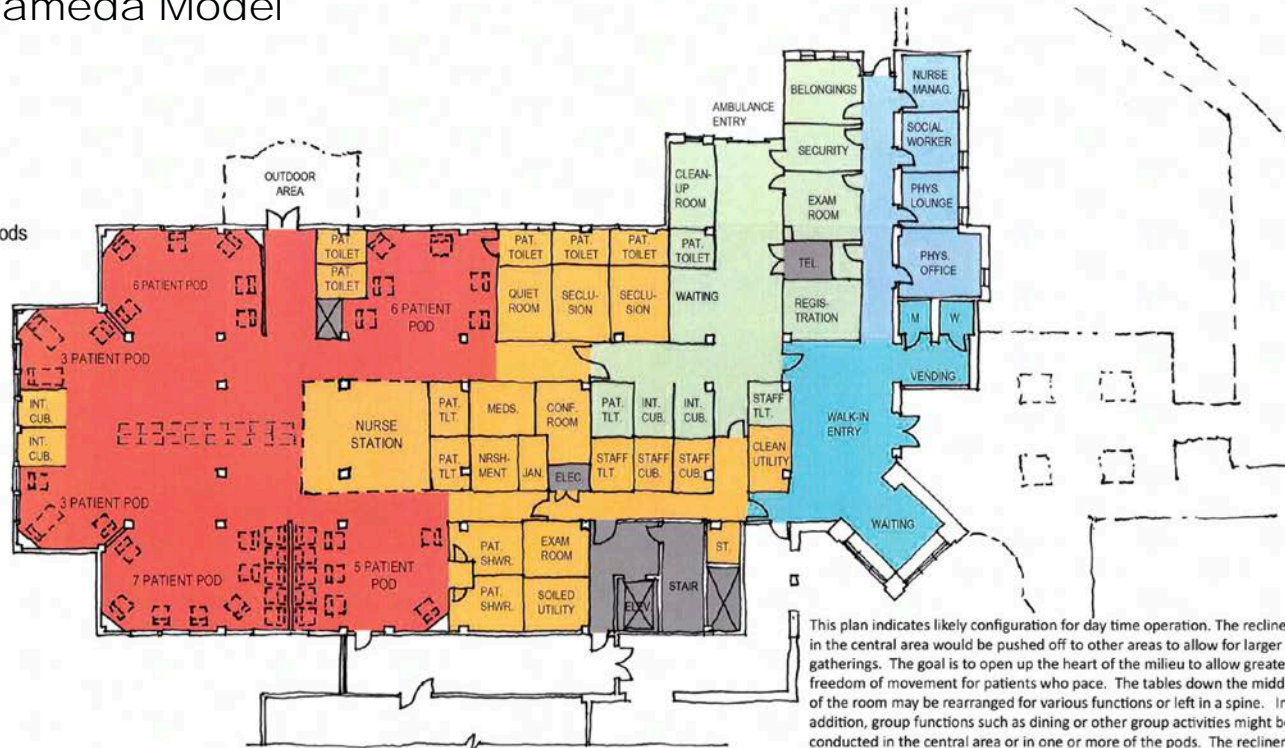

# John George Hospital

## The Alameda Model

First Floor Plan Diagram - Day Time Mode

- Public
- Offices
- Intake
- Support
- Patient Pods

This plan indicates likely configuration for day time operation. The recliners in the central area would be pushed off to other areas to allow for larger gatherings. The goal is to open up the heart of the milieu to allow greater freedom of movement for patients who pace. The tables down the middle of the room may be rearranged for various functions or left in a spine. In addition, group functions such as dining or other group activities might be conducted in the central area or in one or more of the pods. The recliners in the smaller pods are shown largely folded up, although patients in the pods will be able to self select to sleep or rest, reclined and out of the way, if they so choose.
